Education

BSc (Hons) Computer Science — In Progress

2026

University of Pretoria

Relevant courses: COS720 – Information Security, COS730 – Software Engineering

BSc Information Technology — Completed

2022 – 2025

North-West University

Relevant courses: CMPG122 – UI Programming I (80%), CMPG211 – OOP (77%), CMPG212 – Advanced UI Programming (75%), CMPG323 – IT Developments (84%)

Experience

Business Analysis Trainee (Vacation Work)

FNB South Africa — July 2025

- Embedded within the Search & Bots team inside the InterfaceX Business Unit, contributing to a live AI initiative to automate search tag generation within the FNB banking application.
- Investigated and proposed an AI-driven technical solution for search tag automation, translating the business problem into a structured recommendation presented to senior stakeholders.
- Produced and delivered a formal presentation documenting research findings, proposed approach, and projected business impact.

Projects

AI-Powered Insider Threat Detection System — GitHub (*Python, Scikit-learn, Streamlit*)

- Built a solo end-to-end pipeline using a Random Forest classifier (~94% accuracy) to flag high-risk insider activity, with an interactive Streamlit dashboard for model explainability.

Clearvue BI System — GitHub (*Python, Pandas, MongoDB Atlas, Power BI*)

- Led a team building a full ETL pipeline: extracted and cleaned raw data, loaded it into a MongoDB Atlas warehouse, and presented insights via Power BI dashboards.

FIT@NWU Gym Management System — GitHub (*React, Node.js, MySQL*)

- Independently built the student dashboard module — QR-code entry verification and workout/analytics tracking — within a team-built gym management system.

Skills

Languages: Python, JavaScript, Java, C#

Frameworks/Tools: React, Node.js, FastAPI, .NET, Streamlit, Git

Data: PostgreSQL, SQLite, MongoDB Atlas, Power BI, ETL
